### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

 Claims 29-48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Terms such as "first polyamide" (claim 29, line 15; claim 48, line 7), "second polyolefin", "second polyamide" (claim 29, lines 17-18); "thickness of at least about 5% of a total thickness" (claim 29, line 20); "of at least 90 degrees" (claim 33, lines 2-3); "at least 9 percent" (claim 34, line 3); "of from about 5 to 20 percent" (claim 41, line 1), etc. are indefinite and unclear.

A first polyolefin has been defined in claim 29 as one of a specified group (or combination thereof) however when further classifying another group to be selected from "first polyamide" is not specific. "of at least about" and "of from about" are indefinite due to the use of "about".

## Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/764,673

Art Unit: 3721

4. Claims 29-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al. (US 3,130,647) in view of Schirmer (US 4,448,792).

Anderson et al. disclose a process for making a backseamed casing comprising preparing a multilayer heat shrinkable film, wrapping the film longitudinally around a forming shoe with opposing edges overlapped and sealed forming a backseam while forwarding the film; see figure 13. Anderson discusses varying the thickness of at least one ply of the multilayer web; see column 3, lines 10-15 and lists possible materials such as "polyethylene, styrene, nylon, vinylidene and chloride fluorocarbon plastic being representative, but not exclusive.", column 4, lines 7-8. Therefore, it would have been obvious to one of ordinary skill in the art to select a plastic such as an anhydridecontaining polyolefin with at least 1 percent weight anhydride as a matter of design choice or any other polymer.

Furthermore, it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Anderson et al. does not directly disclose three to six layers of film forming the multilayer film, however Schirmer teaches constructing a thermoplastic heat shrinkable multilayer (six layers) bag, see figures 1 and 2. Schirmer also teaches oxygen barrier layer 14 comprising polyvinylidene chloride copolymer. The casing film shrinks in near boiling water or 185 degrees F, see column 4, lines 43-45.

Regarding claim 32, Schirmer discloses using propylene homopolymers or copolymers for a specific layer (see column 3, lines 58-67).

Regarding claim 38, layers 12 (second) and 14 (fourth) are adhered by (third) layer 13 which can be a crosslinked polymer network (see column 3, lines 62-3).

Regarding claim 45, Anderson et al. disclose a lap seal (figure 2).

The examiner takes **OFFICIAL NOTICE** that limitations such as vicat softening points of 90 degrees (claim 33), 9% by weight of unsaturated acid mer present (claim 34), variations of layering, etc. are obvious design choices and at the time the invention was made, it would have been an obvious matter of design choice to a person of ordinary skill in the art to provide the desired polymer layer.

One of ordinary skill in the art, furthermore, would have expected Applicant's invention to perform equally well with the disclosed teachings of Anderson et al. and Schirmer because all of the method steps of forming the backseal have been anticipated.

Furthermore, concerning the thickness ranges and specific percentages of weight it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

### Response to Arguments

5. Applicant's arguments filed 3/26/03 have been fully considered but they are not persuasive. Anderson discloses a multilayer film comprised of polymers and varying thickness; see column 3, lines 10-15. In response to applicant's argument that a multilayered film with an internal layer of at least 5% of the overall thickness, the test

for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

Regarding some of the claim limitations (ie. Vicat softening points of degrees, etc.) it has been held that to be entitled to weight in method claims, the recited structure limitations therein must affect the method in a manipulative sense, and not to amount to the mere claiming of a use of a particular structure. *Ex parte Pfeiffer*, 1962 C.D. 408 (1961).

### Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
